

In this hands-on JavaScript training course, students will learn the basics of JavaScript syntax from variables and arrays to conditionals and loops. They will also learn how to use built-in objects and functions as well as how to create their own functions. Form validation is covered both at an introductory level as well as using Regular Expressions. Finally, students will learn to use JavaScript to manipulate CSS styles on the fly in response to user interaction.

Course Objectives:

- Effectively use JavaScript syntax to create dynamic web pages.
- Manipulate and retrieve information from objects in the HTML DOM.
- Use event handlers to call JavaScript code to react to user input.
- Create variables and arrays to hold your program data.
- Create functions to modularize your JavaScript programs.
- Use the built-in String, Math, and Data JavaScript objects.
- Control the flow of your programs with loops and conditionals.
- Create roll-over images with JavaScript.
- Use Regular Expressions to validate forms.
- Create dynamic forms.
- Dynamically manipulate the DOM tree.

Audience: Students wishing to learn JavaScript to create dynamic websites.

Prerequisites: HTML experience is required. Programming experience in a high-level language is required. Basic CSS knowledge is helpful.
