

This 3-day training course teaches students that delivering software functionality using Kanban is radically different from traditional waterfall project management. Rather than plan, instruct and direct, Kanban utilizes a Lean "pull" implementation to guide the work through the process. Using Kanban enhances organization agility, improves visibility of work flowing through the process and provides greater transparency for impediments that inhibit throughput. Participants learn how to implement Kanban and all of the controls and reporting necessary to monitor the flow of work. Labs, case studies, and examples are used to bring home the realization of how to implement Kanban. In addition to the labs that are part of the training curriculum, an optional day is available where our instructor will work with your organization to design a roadmap for implementing Kanban using the existing processes. This session culminates with a Kanban board that can be used immediately for making work visible.

Course Objectives:

- Understand the origins of Kanban, the theory behind it and how it relates to agile software development.
- Know how to complete a " Value Stream Mapping" and what to include.
- Comprehend throughput and how to organize the work.
- Grasp how to manage the process and the input queue.
- Understand options for tuning the Kanban implementation.
- Comprehend relevance and implementation of key metrics.

Audience: Project managers, team leaders, Kanban change agents.

Prerequisites: None.

Number of Days: 3 days

<p>1</p>	<p>Kanban Overview and Introduction House of Lean Defining Kanban Motivation for Kanban Managing Quality Work In Progress (WIP) How to Prioritize Demand vs Throughput Sources of Variability</p>		<p>The Work Card Value Stream Lab (Part 2- Designing the Card Wall</p>
<p>2</p>	<p>Value Stream Mapping The Value Stream Making Work Visible Value Stream Lab (Part 1- Defining the Start and the End) Card Walls Demand Analysis Allocating Capacity</p>	<p>3</p>	<p>Throughput Identifying Work Item Types Sizing Work Items Building User Stories User Story Lab Story points Visual Control Pull vs Push Theory of Constraints Service Levels: Class of Service Throughput Application Lab (Incorporating Class of Service into the Card Wall)</p>

- 4 **Managing the Process**
 - Daily Standup Meetings
 - After Meetings
 - Queue Replenishment Meetings
 - Release Planning Meetings
 - Triage
 - Geographically Dispersed Teams
- 5 **Improving the Process**
 - The Importance of Cadence
 - Limiting Work-In-Progress
 - Identifying Bottlenecks
 - Removing Waste from the Value Stream
- 6 **Key Metrics Review**
 - WIP
 - Lead Time Throughput and Measuring
 - Flow
 - Blocked Work
 - Quality
 - Failure Load
