

This is a five day, in-depth course that explores installation, configuration and maintenance of Linux systems. The course focuses on issues universal to every workstation and server. This course material is designed to provide extensive hands-on experience. Topics include: installation and configuration; the boot process; user and group administration; filesystem administration, including quotas, ACLs, RAID and LVM, task automation, client networking, SELinux, software management, log files and troubleshooting.

### Course Objectives:

- Understand network configuration and be able to troubleshoot.
- Manage file systems and logical volumes.
- Learn how to control user and file access.
- Install and manage services and processes.
- Learn essential command line operations

**Audience:** Students should already be comfortable working in a Linux or Unix environment

**Prerequisites:** An understanding of network concepts, and the TCP/IP protocol suite is helpful.

**Number of Days:** 5 days

- A Typical Install
- 16 Appendix C: Installing SLES11**
  - YaST Install Program Interface
  - Network Installation
  - SLP for SUSE Linux Installation
  - Installation Choices
  - Kernel Crash Dump Configuration
  - Creating AutoYaST2 Files
  - Using AutoYaST2 files
    - linuxrc Automation
  - Installation Diagnostics
  - After The First Reboot
  - A Typical Install
- 17 Appendix D: iSCSI Target Configuration**
  - iSCSI Target Implementations
  - iSCSI Target Configuration (tgt)
  - iSCSI Target LUN Configuration (tgt)
  - iSCSI Target Auth Configuration (tgt)
  - iSCSI Persistent Configuration (tgt)
