

This 2-day course describes how to write database-backed Web Applications using the Ruby on Rails (also pronounced RoR, or Rails) Framework. Students are taken through the various steps of creating a full-fledged Web Application. Topics include the MVC paradigm, object relational mapping, fill-in forms, sessions, validation techniques, testing, and various other Rails topics. This course covers the fundamental components of the Ruby Programming Language. Emphasis is placed on the object oriented aspects of Ruby. Topics include arrays, hashes, regular expressions, io, exceptions, modules, and applications areas.

**Course Objectives:**

- Download and install Rails along with various other products that allow one to write Rails applications.
- Understand the Model, View, Controller paradigm and how this applies to Rails application.
- Understand the directory structure of a Rails application.
- Build non-trivial database backed Web Applications.
- Understand the ActiveRecord classes and how they wrap database tables.
- Understand the interplay between various controller actions and .erb (embedded Ruby) files.
- Validate Model data.
- Use the Rails console to debug applications.

**Audience:** Developers, system administrators, or managers who need to write a Rails application or evaluate a Rails framework.

**Prerequisites:** Students who are familiar with Ruby Programming language, SQL database and have an understanding of HTML.

**Number of Days:** 2 days

**1 An Overview of Ruby on Rails**  
 What is Ruby on Rails?  
 Overview of Rails Components  
 Installing Rails  
 A Simple Rails Application  
 Starting the Rails Server  
 Static Pages Within a Rails Application  
 The Structure of a Rails Application  
 Generating a Controller  
 Rendering the View  
 Adding a Static Page  
 Dynamic Pages with Embedded Ruby  
 Using the render Method  
 Using the link\_to Method

**2 Rails and HTML Forms**  
 A Basic HTML Form  
 Processing an HTML Form  
 Working with Form Data  
 Other Form Elements  
 Form Tag Helpers

**3 Databases and Rails**  
 Review of the MVC Architecture  
 Entities and Relationships  
 Databases and Models  
 Rails Database Conventions  
 Adding a Model  
 Database Migrations  
 The Rails Database Console  
 Creating a Rails View of a Database Table

Scaffolding  
RESTful Routes and Resources

#### **4 Form Helpers and Validation**

Introduction  
Form Helpers and `form_for`  
Processing Form Helpers  
From Form to Database  
Redirection  
Data Validation  
Validation Helpers  
The presence Validator  
The numericality Validator  
The uniqueness Validator  
The length Validator  
The format Validator  
Custom Validation Methods  
The errors Object  
Displaying Validation Errors in the  
View

#### **5 Adding Style to an Application**

Styling  
Rails and Sass  
Cascading Style Sheets

#### **6 Users**

Introduction  
Configuring an Application for Sessions  
Registering Users  
The Register Action  
The flash Hash  
Validating the Registration  
Logging in  
Logging Out  
Protected Pages  
Filters

#### **7 Putting It All Together**

Introduction  
The Business Application  
Database Terminology  
Linking Two Models  
Adding Tasks  
The Database Tables  
Displaying Employee Tasks  
Deleting a Task  
Listing Employees and Tasks  
Migrations  
Editing a Record
