

This is a demanding and full 5-day course that covers the Spring 3.0 and Hibernate 3 technologies. It includes a focused coverage of the most useful Spring technologies, including the Spring core, Database Access, and Transaction support. The Hibernate material covers all basic areas of Hibernate as well as some advanced topics. The course starts with a fairly comprehensive coverage of the Core features of Spring, including fairly detailed explanations of the motivation behind Spring, Dependency Inversion and Dependency Injection (IoC). It includes coverage of all the basic capabilities, including the various annotation-based configuration options. The data access sections start with coverage of using the Jdbc Template and DaoSupport classes, as well as configuring DataSources. The course then moves on to the basics of Hibernate and mapping classes, then covers Spring / Hibernate integration – mostly using the Hibernate 3 getSession() support and Dependency Injection of a Session to build Spring-free DAOs. The transaction section is fairly straightforward, and covers the use of Spring’s @Transactional annotation and the XML tx namespace configuration as well as integration with Hibernate.

Course Objectives:

- Understand and use Dependency Injection (DI) and the Spring container to manage application object lifecycles and dependencies.
- Program data access code using Spring’s Jdbc or Hibernate templates, and create DAOs (Data Access Objects) using its DAO support.
- Control transaction declaratively with Spring.
- Create applications that use Hibernate to map persistent Java objects to a relational database.
- Use Hibernate versioning and optimistic locking.
- Map collections and associations using Hibernate.
- Create and execute Hibernate queries using HQL and Criteria.
- Be familiar with hibernate annotations, and know the relationship between Hibernate and the Java Persistence API.

Audience: Java developers who need to work with Spring based applications.

Prerequisites: A good working knowledge of basic Java programming, interfaces, and JDBC.

Number of Days: 5 days

<p>1 Introduction to Spring The Challenge of Enterprise Applications Shortcomings of Java/Java EE What is Spring? The Spring Modules The Spring Distribution Spring Introduction Managing Beans A Basic Spring Application Some Bean Classes</p>	<p>Configuration Metadata Declaring Beans The Spring Container Working with Spring Why Bother? Some BeanFactory Methods Dependencies and Dependency Injection Dependencies Between Objects Dependency Inversion Principal Dependency Injection (DI) in Spring Dependency Injection Configuration</p>
--	--

- Advantages of Dependency Injection
- Dependency Injection Reduces Coupling
- 2 More about Bean Properties**
 - Working with Properties
 - Configuring Value Based Properties
 - Using Value Based Properties
 - Property Conversions
 - Constructor Injections
 - Constructor Argument Resolution
 - Setter Injection vs. Constructor Injection
 - Collection Valued Properties
 - Working with Collections
 - Configuring <list> and <set> Properties
 - Configuring Collections of Bean References
 - Map Valued Properties
 - java.util.Properties Valued Properties
 - Additional Capabilities
 - Factory Methods
 - Instance Factory Methods
 - Bean Aliases
 - Bean Definition Inheritance
 - Autowiring
 - Autowiring byType
 - Pros and Cons of Autowiring
 - To Autowire or Not to Autowire
- 3 The Spring Container and API**
 - ApplicationContext
 - ApplicationContext Interface
 - ApplicationContext Implementations
 - Constructors
 - Using an ApplicationContext
 - Spring Resource Access
 - Built-in Resource Implementations
 - Bean Scope and Lifecycle
 - Bean Scope
 - Specifying Bean Scope
 - Inner Beans
 - Compound Names
 - Depends On
 - Bean Creation Lifecycle
 - Bean Creation Lifecycle Details
 - Using the Lifecycle Interfaces for Beans
 - Bean Destruction Lifecycle
 - BeanPostProcessor
 - @PostConstruct and @PreDestroy
 - Event Handling
- MessageSources
- Issues with Messages
- Resource Bundles
- Defining Resource Bundles
- Using Resource Bundles and MessageSource
- Localization/Internationalization
- Paramaterizing Messages
- Annotation Driven Configuration
- Annotations in Spring
- Enabling Spring Annotations
- @Component and Auto-Detecting Beans
- DI Using @Resource
- Complete Declarations Using Annotations
- Other Stereotype Annotations
- @Resource – Additional Uses
- @AutoWired
- Qualifiers
- Lifecycle Annotations
- XML Config – Annotations and Scanning
- Annotation Configuration – Pro/Con
- A Note on the XML Configuration
- A Brief Note on Annotations
- Other Capabilities
- SpEL – Spring Expression Language
- Other SpEL Capabilities
- Validation
- Using Validation
- Configuring Validation
- Validation Constraints
- Additional Capabilities
- 4 Database Access with Spring**
 - Issues with JDBC
 - Problems Using JDBC Directly
 - Let’s Review Some Simple JDBC Usage
 - Simple Query on the Database
 - Problems with the Previous Approach
 - Spring Support for the DAO Pattern
 - Spring DAO Support
 - The Spring Database API
 - The JdbcTemplate Class
 - The JdbcDaoSupport Class
 - DataSources
 - Spring Jdbc Exception Hierarchy

	DAO Based on Spring Classes		Hibernate Mapping Types
	Configuring a DataSource		Common Hibernate Type Mappings
	Looking up a DataSource in JNDI		Field Access or Property Access
	Building a DAO without the Support Class		The Mapping File
	Queries and Updates		Hibernate Sessions
	Querying with JdbcTemplate		The Session Interface
	Mapping Result Rows to Objects		Retrieving Persistent Objects
	Defining a RowMapper Class		Logging
	Inserting/Updating		Hibernate.show_sql
	Other Kinds of Query Methods		Simple Logging Façade for Java-SLF4J
	The SimpleJdbcTemplate		Apache Log4J
	The SimpleJdbcTemplate Class		Hibernate log4j.properties file
5	Introduction to Hibernate		The log4j.properties file
	Hibernate Overview		Modifying log4j.properties for Hibernate
	The Issues with Persistence Layers		Hibernate Logging Categories
	Object-Relational Mapping (ORM) Issues	6	Spring / Hibernate Integration
	Issues with JDBC Alone		Contextual Sessions
	Hibernate Benefits		Session Propagation
	Hibernate Environments		First-Acquiring a SessionFactory Instance
	Hibernate Architecture		Contextual Session
	More Detailed Architecture		Using Contextual Sessions
	Using Hibernate		What is the “Current” Context
	Acquiring Hibernate		Contextual Session Scope
	Configuring Hibernate		Spring/Hibernate Integration
	Hibernate.cfg.xml Elements		Spring Support for Hibernate
	SessionFactory Configuration		LocalSessionFactoryBean
	The Configuration Class		Spring Configuration of SessionFactory
	The SessionFactory Interface		Spring Free DAO
	SessionFactory API		HibernateDAOSupport
	The Session Interface	7	Querying with HibernateTemplate
	Sessions and Transactions		Updates and Queries
	Mapping a Simple Class		Inserting and Updating
	Persistent Entity Classes		Inserting Instances
	Persistent Classes		Modifying a Persistent Instance
	The Event Class		Deleting an Instance
	The id Property		Querying and Hibernate Query Language (HQL)
	The Hibernate Mapping File		HQL Basics
	The <hibernate-mapping> Element		Executing a Query
	The <class> Element		Other Common Query Methods
	The EVENTS Table		Where Clause / Restriction
	Mapping the id Property with <id>		HQL Operators and Expressions
	More About Primary Keys		Query Parameters
	Generating the id Value		Using Query Parameters
	Mapping Properties with <property>		Named Queries

	Projection Queries		Version Property in Java Class
	Aggregate Functions		Version Element in Mapping File
8	Transactions		Automatic Version Maintenance
	Hibernate Transactions		Updating a Detached Instance
	Transaction Lifecycle		Session.saveOrUpdate()
	Hibernate and Transactions		The unsaved-value Attribute
	Hibernate Transaction Demarcation		Locking Objects
	Working with Transactions		Common Lock Modes
	The Hibernate Transaction API	10	Relationships
	Working in a Managed Environment		Object Relationships
	Spring Transaction Management		Characteristics of Relationships
	Transaction Managers		Directionality
	Configuring Transaction Managers		Collections of Value Objects
	Spring Transactions and Hibernate		Modeling a Set of Values
	JTA Transaction Manager		Mapping the Set of Values
	Spring Declarative Transaction		Using a Set of Values
	Management		More on the Java Collection Type
	Transactional Scope		Using the Java Collection Types
	Transaction Attributes for Propagation		Modeling a List of Values
	MANDATORY		Mapping a List of Values
	NESTED		Sorted and Ordered Collections
	NEVER		Collections of Components
	NOT_SUPPORTED		Mapping Collections of Components
	REQUIRED		Mapping Entity Relationships
	REQUIRES_NEW		Inheritance
	SUPPORTS		Entity Inheritance
	Transaction Attributes		Details of Entity Inheritance
	Rolling Back and Exceptions		Single-Table Strategy
	Spring Proxies and Direct Invocation		Class Definitions for Single-Table
	[Optional] Spring Transactions - XML		Mapping for Single-Table
	Configuration		Sample Table Entries
9	Lifecycle		Single-Table: Pros and Cons
	The Persistence Lifecycle		Table per Subclass (Joined Subclass)
	Hibernate Object States		Mapping for Table per Subclass
	Transient and Persistent State		Joined: Pros and Cons
	Detached and Removed State		Table per Concrete Class
	Hibernate Object States and Transitions	11	Spring and the Web
	The Persistence Context		Spring and Java EE
	The Persistence Context as Cache		Java EE Web Applications
	Synchronization to the Database		Web Application Structure
	Flushing the Session		Web Application Components
	Persistence Context and Object Identity		ApplicationContext and Web Apps
	Yes, It's Complicated		Configuring ContextLoaderListener
	Versioning and Optimistic Locking		Using the Application Context
	Using a Detached Instance		
	Optimistic Locking and Versioning		

12 Additional Hibernate Topics

- equals() and hashCode()
- Defining equals() and hashCode()
- Redefining equals()
- Caching
- Second-Level Cache
- Data Appropriate for Caching
- Cache Providers
- Configuring Caching
- Concurrency Strategies
- Managing the Caches
- Design Considerations
- Long Conversations
- Session-Per-Conversation
- Problems with Web Applications
- Open Session In View Pattern
- Query Efficiency Techniques
- Beware of n+1 Select Issue
- Prefetching Data in Batches
- Data Access Object (DAO)

13 Hibernate and the Java Persistence

API (JPA)

- JPA Persistence API Overview
- Java Persistence Environments
- Hibernate and JPA
- Mapping a Simple Class
- Entity Classes
- Event Entity Mapped with JPA
- javax.persistence.Entity Annotation
- The Event Class
- The Id Property
- Mapping Properties
- Basic Mapping Types
- Entity Manager and Persistence Context
- The Entity Manager & Persistence Context
- Persistence Unit
- persistence.xml
- Acquiring an EntityManager
- Working with Transactions
- Retrieving Persistent Objects
- Inserts and Queries
- Persisting a New Entity
- Java Persistence Query Language
- Executing a Query
- WHERE Clause and Query Parameters

- Named Queries
- Version Property in Java Class
- Versioned Class and Detached Objects
- Relationships
- JPA Support for Relationships
- Mapping the Many-To-One Relationship
- Mapping the One-To-Many Relationship
- Loading and Cascading
- Queries Across Relationships
- Inheritance
- Entity Definitions for Single-Table
- Entity Definitions for Joined
- Recap
- Resources for More Learning
